To apply:
1. Glass should be clean, dry and smooth.
2. Slowly peel the appliqué from film, taking care not to stretch.
3. Position in desired location on the inside of your window and press into place.

The appliqués may stretch if too warm. Choose a cool time of day to hang and avoid stretching. If appliqués are stiff, warm them with a blow dryer for a few seconds to soften. A light mist of water will soften older appliqués. Appliqués will stick together if allowed to fold over or stacked on top of one another.
Store unused appliqués flat in an airtight bag in single layer. Exposure to air may dry out product. Keep in cool dark place.To clean, spray a light mist of water and gently wipe. Do not soak in water or use solvent-based cleaners.
